

MATRIX™

SADDLE PADS

Revised 1.9.12

The Matrix line is part of the T3 System: an innovative approach to equipment manufacturing that integrates the latest ergonomic research with the most popular time-tested features, and marks a transformation in the design of products for the art, sport, and science of riding. A process in which comfort, style and performance are systematically engineered into the product from the inside out, based on new insights into the interactive dynamics of equine physiology.

Matrix pads are proudly made in the USA, and 90% of the materials used in the pads are also made in the USA.

HALF PAD SERIES

Half pads have traditionally been used as a means to add corrective, therapeutic or orthopedic features to standard saddle pads. The Matrix Series of half pads are ergonomically designed. Build the half pad that your horse needs from a variety of materials and inserts that provide not only orthopedic and therapeutic protection but also contribute to overall performance.

FEATURES & BENEFITS

- Linear quilt of etc[™] fabric, breathable/wickable batting and polycotton twill bottom.
- etc[™] is an innovative fabric that provides a non-slip, anti-friction surface for a secure and stable saddle position. Offers high wicking and breathability for maximum moisture and heat removal. Stain-resistant and easy to clean.
- Ergonomic designs are specially contoured to provide support and protection for critical muscle groups without interfering with movement.
- Choose from a bottom lining of luxurious sheepskin, high-wicking Woolback or easy-clean Coolback
- Comes with spine-closure pocket. See page 8 for half pads with inserts.
- For no roll option, add NR to part number.
- Small: 16"-16½", Medium: 17"-17½", Large: 18"-18½"

MATRIX™

SADDLE PADS

Ergonomic Dressage Hex Pad

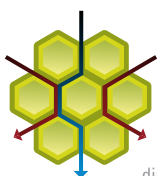

Ergonomic All Purpose Hex Pad

HEX PRO-IMPACT HALF PAD SERIES

The Matrix Half Pad with Hex Pro Impact has the ergonomic design and high tech materials of the Matrix Half Pad with the addition of high density Hex Poron XRD™ built in to the top of the pad at key points where the saddle applies concentrated pressure. Hex XRD™ is more than twice the density of our standard high density XRD, significantly improving on the ultra-thin, ultra-light concussion protection. The Matrix Hex Pad is perfect for riders who prefer not to have to swap inserts. Designed to work with the Matrix Schooling Liners and Show Liners (page 4).

FEATURES & BENEFITS

- Linear quilt of etc™ fabric, breathable/wickable batting and polycotton twill bottom.
- etc™ is an innovative fabric that provides a non-slip, anti-friction surface for a secure and stable saddle position. Offers high wicking and breathability for maximum moisture and heat removal. Stain-resistant and easy to clean.
- Choose from a bottom lining of luxurious sheepskin, high-wicking Woolback or easy-clean Coolback
- Six pieces of Poron Hex XRD™ strategically placed at key points where the saddle applies concentrated pressure to protect the back.
- The hex shape creates air channels for increased breathability and heat dispersal.
- Machine washable.
- Poron XRD™ has Microban™ for antimicrobial/antifungal protection that won't break down or dissipate over time.
- For no roll option, add NR to part number.
- Small: 16"-16½", Medium: 17"-17½", Large: 18"-18½"

Poron® Hex XRD™ is more than twice the density of the standard Pro-Impact, significantly improving the ultra-thin, ultra-light concussion protection.

Absorbs and controls kinetic energy to diminish vibration, reduce fatigue, and enhance stability for the rider. The hex shape creates air channels for increased breathability and heat dispersal.

MATRIX™

SADDLE PADS

Ergonomic Schooling Liner

Traditional Schooling Liner

Show Liner

HALF PAD LINERS

These specially designed liners will keep your Matrix Half Pad clean without interfering with the technology and fit of the pad. Use the schooling liner for everyday use; use the show liner if you want to use your half pad in the show ring.

SCHOOLING LINERS - FEATURES & BENEFITS

- Thin membrane of et[®] fabric acts as a dirt barrier between horse and saddle pad. et[®] fabric uses advanced technology to create a non-slip but anti-friction surface. Typically, “non-slip” depends on friction for grip and friction creates heat. et[®] provides a non-slip surface with grip but its anti-friction properties minimize heat buildup.
- 1” square quilt of et[®] fabric, breathable/wickable batting and polycotton twill bottom creates a traditional look.
- Contoured designs for both the traditional and ergonomic style half pads creates a securely fitting pad that does not interfere with the function and benefits of the Matrix Half Pad.
- Easy care: Machine washable, dryer safe. Can be bleached (use color-safe bleach on colors).

SHOW LINERS - FEATURES & BENEFITS

- 1” square quilt of et[®] fabric, breathable/wickable batting and polycotton twill bottom.
- The Matrix Show Liner creates a traditional look for the show ring without interfering with the function and benefits of the Matrix Half Pad. Suitable for lower level competitions.
- For higher level competitions, we recommend the Matrix Competition Pads, all-in-one full pads with an ergonomic Half Pad integrated into the pad. Eliminates the need for a liner (see page 5).
- Easy care: Machine washable, dryer safe. Can be bleached (use color-safe bleach on colors).

COMPETITION SERIES

The full-size pads in the Competition Series are specifically designed to offer the maximum amount of protection, support and stability for the demands of the three major sports: cross country, dressage and jumping. As an all-in-one pad for competition, these pads use advanced technology concealed behind a traditional appearance.

FEATURES & BENEFITS

- 1" square quilt of etc[™] fabric, breathable/wickable batting and polycotton twill bottom.
- etc[™] is an innovative fabric that provides a non-slip, anti-friction surface for a secure and stable saddle position. Offers high wicking and breathability for maximum moisture and heat removal. Stain-resistant and easy to clean.
- An overall design specific to each of the main sports in English riding: cross country, dressage and jumping.
- The ergonomic design of the half pad lining creates a stable, secure pad as well as providing support and protection for critical muscle groups and maximum range of motion.
- Choose from a bottom lining of luxurious sheepskin, high-wicking Woolback or easy-clean Coolback
- Comes with spine-closure pocket. See page 9 for Competition Pads with T³ inserts.

ENDURANCE SERIES

The Matrix Endurance Series is specifically designed for endurance riding to offer the maximum amount of protection, support and breathability required for intense long distance riding. Like the Competition Series, the Endurance Series are all-in-one pads.

FEATURES & BENEFITS

- Linear quilt of etc[™] fabric, breathable/wickable batting and polycotton twill bottom.
- etc[™] is an innovative fabric that provides a non-slip, anti-friction surface for a secure and stable saddle position. Offers high wicking and breathability for maximum moisture and heat removal. Stain-resistant and easy to clean.
- Choose from a bottom lining of high-wicking Woolback[®] or easy-clean Coolback[®]
- The fleece bottom is bi-level: 1" pile under the saddle, ½" pile behind the leg for improved heat dispersal. See graphic above.
- Special ergonomic design for endurance protects and supports the trapezius muscle over a wide area.
- Fleece stops on either side of the girth area for close contact.
- Hook and loop billet straps and girths straps.
- Comes with spine-closure pocket. See page 10 for endurance pads with T³ inserts.
- English or Sport style to fit a variety of endurance saddles.

MATRIX™

SADDLE PADS

CUSTOMIZED BACK PROTECTION

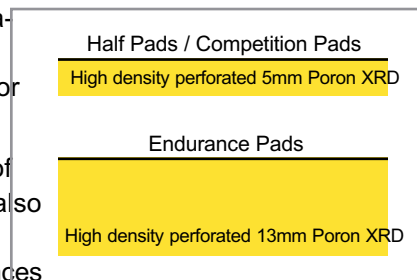

The Matrix inserts have been designed using the T3 principles of ergonomic design and advanced technology. Choose the Matrix pad with inserts most suited to your horse's needs. You can also purchase inserts separately so you can switch inserts for different horses or different needs using the same pad.

PRO-IMPACT™

Ultra-light high performance

For athletic performance and intense schooling. The ultra-light, ultra-thin layer of high density Poron XRD™ provides superior concussion protection by absorbing 90% of the shock from impact. Perforated for breathability and treated with Microbar® for antimicrobial protection.

Poron® XRD™ is high performance open-cell foam that absorbs most of the energy not only from the impact of saddle on horse's back, but also from the rider on the saddle. Poron XRD™ protects the horse from impact and it minimizes the energy bounce back that a rider experiences when landing in the saddle, allowing for a more secure seat.

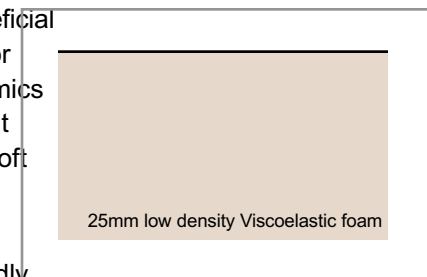

Concussion Protection

LO-IMPACT™

Viscous elasticity for advanced cushioning

For general riding and schooling, low impact training; especially beneficial for horses that are in a conditioning program. Also recommended for horses with back issues. This low density viscoelastic (VE) foam mimics the density of muscle tissue, offering a wide supportive base without restricting or inhibiting muscle movement. Allows for expansion of soft tissue required to condition and build muscle, therefore creating an environment for optimal muscle conditioning.

Because of its thickness, Lo-Impact does not dissipate heat as rapidly as the Pro-Impact; its use is confined to low impact riding where its cushioning properties are most important.

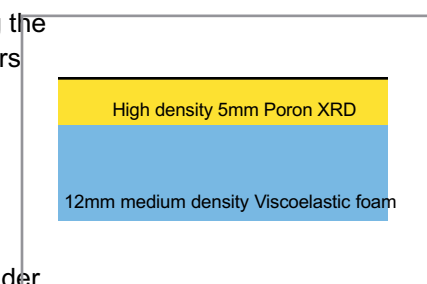

Conditioning Protection

ORTHO-IMPACT™

Impact absorption with dynamic support

For general riding and schooling, especially beneficial for stabilizing the saddle and compensating for horse conformation problems; for riders who need back support. A layer of ultra-light high density Poron XRD™ minimizes concussion; medium density viscoelastic (VE) foam offers stabilizing support for both saddle and rider.

Poron® XRD™ with Microbar® is high performance open-cell foam that absorbs 90% of the energy from the impact from the saddle on the horse's back as well as minimizing the energy bounce back that a rider experiences landing in the saddle, allowing for a more secure seat. VE foam offers maximum cushioning protection without restricting range of motion.

Supportive Protection

TOKLAT®

Blending technology and tradition in ways that can make a telling difference in the way your horse performs.

MATRIX™

SADDLE PADS

THE TECHNOLOGY

PORON® XRD™

Poron® XRD™ with Microban® antimicrobial protection is high performance open-cell foam that offers the best protection from repeated shock absorption. When an object comes in to high speed contact with the foam, XRD™ immediately firms and absorbs 90% of the energy, creating a protective shield that absorbs the impact. It then returns to a submissive state where it remains flexible and non-restrictive. The air-permeable open cells resist collecting moisture and perspiration on the surface of the skin—the flex of the material allows air to circulate freely. The perforated Poron XRD™ further ventilates the material for better heat and moisture management. Microban® inhibits bacteria, mold and mildew.

PORON® XRD™ AND DENSITY

Foam density is measured in pounds per cubic foot. In standard foams, the more dense the foam, the heavier it is. However, the molecular structure of Poron XRD™ provides a high level of impact absorption even at lower densities, allowing us to develop ultra-lightweight inserts that protect the horse without adding the unnecessary weight that gels and other memory foams add. T3 inserts use Poron with a density of 12 pcf. Hex XRDs™ 22 pcf.

ETC™ FABRIC

Etc™ fabric uses advanced technology to create a non-slip but anti-friction surface. Typically, “non-slip” depends on friction for grip and friction creates heat. Etc provides a non-slip surface with grip but its anti-friction properties minimizes heat buildup.

Etc™s more stain resistant than poly/cotton traditionally used in saddle pads, so washes easily and well. Machine washable, dryer safe. Can be bleached (use color safe bleach for colors). Made in the USA.

MATRIX™

SADDLE PADS

THE MATERIALS

SHEEPSKIN

- 100% Australian sheepskin tanned in New Zealand
- Eco-friendly, environmentally-safe tanning process minimizes toxic or harmful chemicals

- Merino cross hides selected for the perfect density to create the ideal pile— resilient, durable and cushioning
- Over 1” pile provides the best protection with closest contact possible in a natural hide
- Has high breathability for a “live fiber” because air passes through the hollow fur fibers
- Consumer-safe for use in the medical and infant care industries
- Has met the stringent Testing and Specifications to carry the AWI Woolmark

WOOLBACK®

- 100% Virgin Wool with the superior moisture-wicking and heat dispersal properties that wool is known for
- High breathability as air circulates within the pile and easily passes through the woven backing
- 1” pile provides ideal density and thickness for concussion protection and comfort
- Easy to clean: machine washable, dryer safe
- Made in the USA

COOLBACK®

- 100% polyester orthopedic fleece has been specially formulated to withstand the rigors of equestrian use
- As a manufactured fleece, Coolback® has consistent quality every time with none of the variations common in natural hides
- Superior breathability as air circulates within the pile and easily passes through the woven backing
- 1” super resilient pile provides ideal density and thickness for concussion protection
- Excellent recovery over long-term use and washing for maximum protection every time you sit in the saddle
- Easy to clean: machine washable, dryer safe. Can be bleached (use bleach for colored fabrics on colored fleece)
- Made in the USA
